

**Amendment to the Abstract:**

The Abstract has been amended as shown below. A clean, revised Abstract is attached.

A ceramic ink comprises a glass frit, a pigment, an organic vehicle and an oxidising agent. The oxidising agent comprises a bismuth salt of nitric acid. The inks provide good quality, non-stick coatings and are particularly suitable for use in the production of laminated automotive glass. A method of coating or decorating a substrate includes the step of applying the ceramic ink to the substrate.

## ABSTRACT

A ceramic ink comprises a glass frit, a pigment, an organic vehicle and an oxidising agent. The oxidising agent comprises a bismuth salt of nitric acid. The inks provide good quality, non-stick coatings and are particularly suitable for use in the production of laminated automotive glass. A method of coating or decorating a substrate includes the step of applying the ceramic ink to the substrate.
